```

Splitting the data into training data & test data

```
[ ] X_train, X_test, Y_train, Y_test =
```

```
[ ] # label spam mail as 0;  ham mail

    mail_data.loc[mail_data['Category'
    mail_data.loc[mail_data['Category'
```

spam - 0

ham - 1

```
[ ] # separating the data as texts anc

    X = mail_data['Message']

    Y = mail_data['Category']
```

```
[ ] print(X)

    0       Go until jurong point, c
    1                           Ok l
    2       Free entry in 2 a wkly c
    3       U dun say so early hor..
    4       Nah I don't think he goe
                                  ..
    5567    This is the 2nd time we
    5568                 Will ü b go
    5569    Pity, * was in mood for
    5570    The guy did some bitchin
    5571                           R
    Name: Message, Length: 5572, dty
```

```
[ ] print(Y)
```

```
[ ] # transform the text data to featu

    feature_extraction = TfidfVectoriz

    X_train_features = feature_extract
    X_test_features = feature_extracti

    # convert Y_train and Y_test value

    Y_train = Y_train.astype('int')
    Y_test = Y_test.astype('int')
```

```
[ ] print(X_train)
```

```
[ ] print(X_train_features)
```

Training the Model

Logistic Regression

```
[ ] model = LogisticRegression()
```

```
[ ] model = LogisticRegression()
```

```
[ ] # training the Logistic Regressior
    model.fit(X_train_features, Y_trai
```

```
LogisticRegression(C=1.0,
class_weight=None, dual=False,
fit_intercept=True,

intercept_scaling=1,
l1_ratio=None, max_iter=100,

multi_class='auto',
n_jobs=None, penalty='l2',

random_state=None,
solver='lbfgs', tol=0.0001,
verbose=0,

warm_start=False)
```

Evaluating the trained model

```
[ ] # prediction on training data

    prediction_on_training_data = mode
    accuracy_on_training_data = accura
```

```
[ ] print('Accuracy on training data :
```

```
Accuracy on training data :  0.9
```

```
[ ] # prediction on test data

    prediction_on_test_data = model.pr
    accuracy_on_test_data = accuracy_s

[ ] print('Accuracy on test data : ',

    Accuracy on test data :  0.9659
```

Building a Predictive System

```
[ ] input_mail = ["I've been searching

    # convert text to feature vectors
    input_data_features = feature_extr

    # making prediction

    prediction = model.predict(input_c
    print(prediction)

    if (prediction[0]==1):
      print('Ham mail')

    else:
      print('Spam mail')

    [1]
    Ham mail
```

THANK YOU
